

Quantum Timber Finishes Range - How does Quantum work

Quantum Timber Finishes are formulated with vegetable derived resinated oils sourced entirely from renewable resources. Unlike other traditional surface coatings, most of Quantum's products work by penetrating the timber - binding the wood fibres together to create a protective barrier against moisture, preventing peeling, cracking warping and splintering.

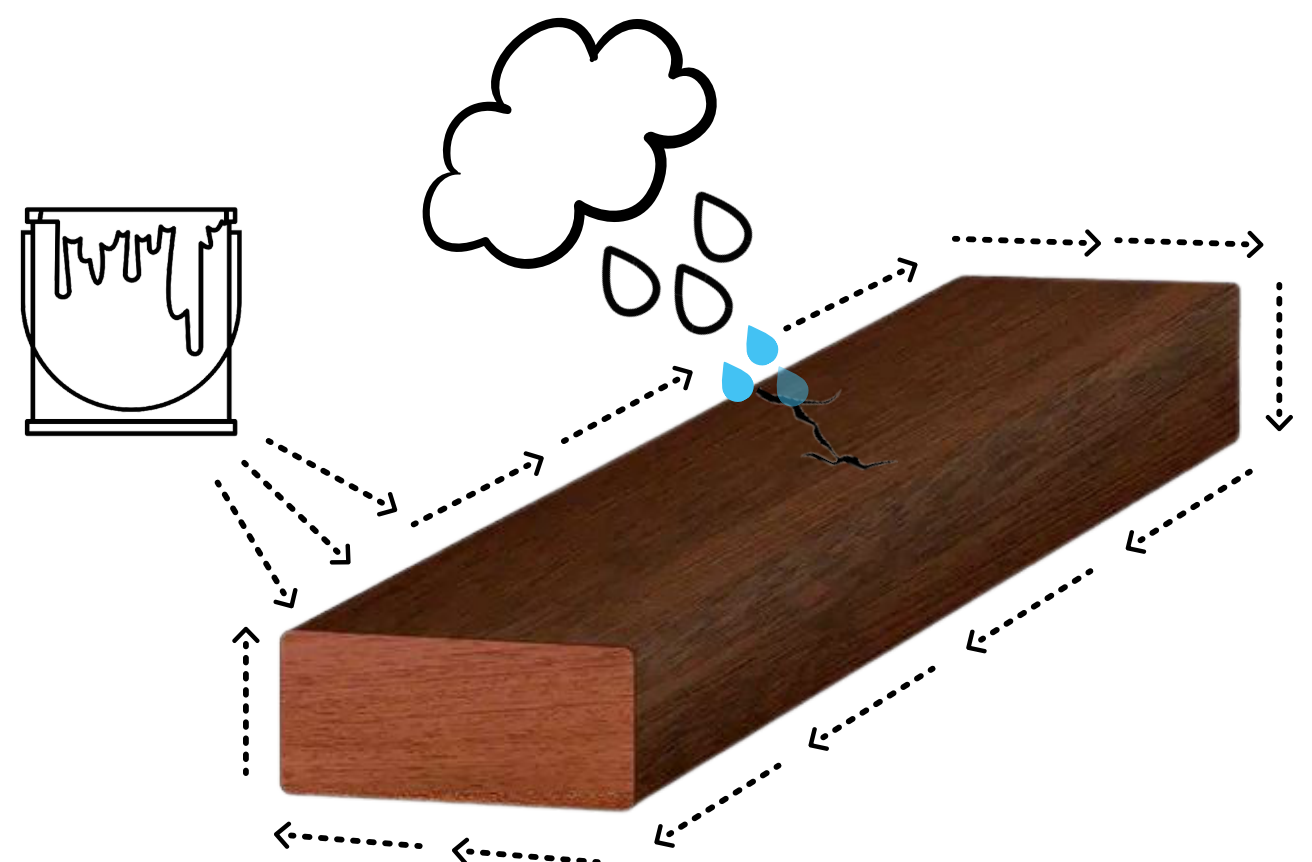

Traditional surface coatings, protect the surface of the timber, only penetrating a few millimetres deep. Quantum coatings, when prepared correctly with our preparation products, work by opening up the timber grain to remove tannins and extractives, preventing poor adhesion and compromised coating performance.

When your timber has been prepared, apply your choice of Quantum Timber Finishes product. Quantum products will penetrate, protect and nourish the timber from the inside out repelling water from the surface of the timber.

Quantum Timber Finishes:

Quantum penetrates the timber to deeply nourish and protect from the inside out, repelling water and protecting the timber from the harsh Australian elements.

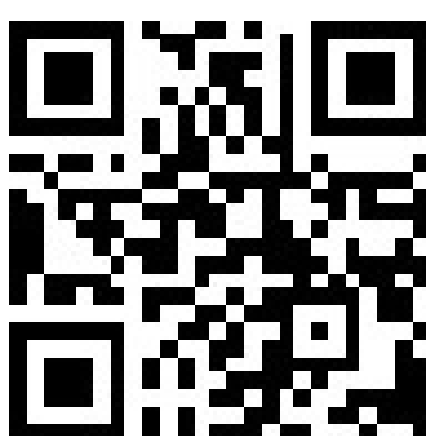

Other Products:

Work by protecting the surface of the timber only - leaving the majority of the timber exposed. If the penetrative seal is broken, water can enter the timber's core and cause swelling.

The Quantum Difference: *Begin your journey with us today.*

- Bio Based Products
- Water Wash Up
- Proven Results: Over 25 years experience
- Low VOC
- Penetrating Oil
- Colour Range: Largest colour range available
- Environmental Sustainability
- Designed for Australian Conditions

- Australian Owned and Made
- Enhance natural grain without concealing the timber grain
- Easy to Use: Minimal Maintenance
- Low Cost
- Knowledgeable & experienced support
